GENERAL DESCRIPTION

The Model 2005 is a microprocessor based temperature compensated flow rate indicator/totalizer that provides local display and transmits flow data for control capability. The unit is part of a cost effective family of flow products designed to accept inputs from pulse producing or analog producing flowmeters.

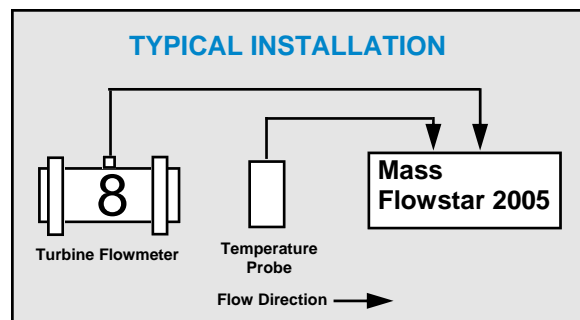

The FLOWSTAR™ series offers software packages to support the following functions:

- Model 2000 Volumetric Flow Rate Indicator/Totalizer for Liquids and Gases
- **Model 2005 Temperature/Pressure Compensated Mass Flow Computer for Liquids**
- Model 2007 Temperature/Pressure Compensated Mass/Volumetric Batch Controller for Liquids with Intelligent Batching

The unit is factory programmed to display in either English or Metric units when purchased with a Hoffer turbine flowmeter. This feature should save the user numerous hours of set up time that is associated with other microprocessor based units

available in the marketplace. Programming is done through the front panel keyboard, as well as through the two way RS-232 or RS-422/RS-485 multi-drop communications port.

The FLOWSTAR™ 2005 flow computer combined with Hoffer turbine flowmeter provides the user with a cost effect means for extremely accurate mass flow measurement. The standard linearization feature improves the flowmeter linearity to ±0.1% of reading over 20:1 to 100:1 turndown ranges.
